

Is your medication management up to industry standards?

Efficiency is more critical than ever

More **complex** and **diverse procedures** are shifting out of the hospital...

Which means centers like yours are taking on **greater responsibility** and **risk**.

But, your **reimbursement is typically a fraction** of the same procedure at a hospital.

In order to succeed, you need:

Smoother workflow

Your staff depends on manual documentation, collective experience, and “muscle memory” that can lead to errors.

Of the medication-safety-related events analyzed in an ECRI Institute PSO report, **67%** fell into the category of “wrong” errors.¹

Risk management

Easy access to poorly secured medications opens the potential for drug diversion that can result in DEA investigations and fines.

One survey reported the prevalence of controlled substance abuse in the OR at **9.8%**²

Cost control

Your manual workflows are inefficient and lead to waste—in a care setting where every penny counts.

“Traditionally, reimbursement for a hospital-based ambulatory procedure has been **92% higher** than reimbursement for the same procedure performed in an ASC.”³

It's time to standardize your medication management workflow.

What if you could...

Take the guesswork out of inventory management with automation?

Control and trace who accesses each medication?

Advance medication management despite your resource constraints?
