

Is your pharmacy inventory managed by today's data or yesterday's history?

You've made progress shifting medications from the Central Pharmacy closer to the clinical care areas. However, aggregating and analyzing data to create timely and actionable intelligence remains a challenge for Pharmacy, Nursing and Informatics. Collecting data continues to be a manual and labor-intensive process, and the information can be found in various databases.

Pharmacy teams struggle to get real-time data related to:

Medication Availability

Medication Utilization Rates

Medication Procurement

Pharmacy Workflow

Many health systems rely on purchase history rather than actual drug utilization, which can lead to unnecessary medication purchases, medication waste and continued dependence on manual processes.

What if you could take control over your Central Pharmacy medication inventory?

To do that, you'll need to **create the foundation for an enterprise medication management system**

With the integration between the BD Pyxis™ Logistics and the BD HealthSight™ Platform, you can:

Track, report and manage medication inventory in near real-time

Provide visibility into operational dashboards to support Nursing and Pharmacy operations

Manage medications in the Central Pharmacy, care areas and across your enterprise

With BD Pyxis™ Logistics perpetual inventory management software and integrated barcode technology, you can:

View inventory, associated drug cost, established par levels, pharmacy medication locations and expiration dates

Automate medication procurement based on established par levels

Mitigate errors associated with time-consuming manual data entry

Reduce variation in pharmacy practices

Automate pharmacy workflow

With automation embedded in the BD Pyxis™ Logistics solution, you'll have the ability to:

Maximize operational efficiencies with prioritized and standardized workflows

Integrate with carousel technology to optimize medication storage and enhance medication distribution

Utilize mobile technology to support workflow efficiency

When you take control of your Central Pharmacy medication inventory, you will have the potential to help:

- Reduce medication inventory costs and waste
- Improve medication availability
- Enhance pharmacy workflow and operational efficiencies

Learn how to manage medication inventory and help reduce medication errors across your healthcare systems with BD Connected Medication Management solutions at bd.com.
