

What if you could know medications are where they need to be?

With prescription medication costs representing more than **13% of U.S. healthcare spend**¹ and possibly a similar percentage of your healthcare system's budget, it's urgent you get control of medication inventory and waste across your enterprise.

13%

of healthcare spend goes to prescription medication

You've shifted some meds from your central pharmacy to care units closer to your patients who need them. But is that enough?

- Demand for meds is dynamic
- Pharmacy operations teams are stretched thin
- Stock-outs impact patient care

Sure, you can run reports to gauge your medication inventory at any point in time, but they'll only give you snapshots of "what was" in your automated dispensing cabinets. This means:

Limited Predictability

Limited Visibility

Lack of Flexibility To Meet Demand

See the value and location of medications across your enterprise.

With **BD Pyxis™ Logistics**, you can:

Reduce inventory to **mitigate costs**

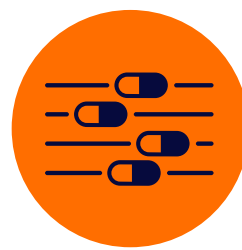

Improve medication inventory turns

This means you enable more efficient central pharmacy operations from ordering, to stocking, to administration, to bedside.

Fine-tune medication inventory levels based on actual and predicted needs.

With **BD HealthSight™ Inventory Optimization Analytics Software**, you can:

Act on automated PAR-level recommendations to **adjust medication inventory**

Help manage **drug shortages** to enhance medication availability

Prioritize **medication redeployment** task workflows for soon-to-expire and slow-moving medications

Provide **enterprise visibility** to compare medication inventory and valuation across facilities

When you can manage your medication inventory using predictive analytics, you'll be better positioned to:

- Lower carrying costs
- Bolster medication availability
- Increase inventory turns
- Reduce avoidable waste
- Measure workflow impact through key performance indicators

Establish and measure medication management practices enterprise-wide.

With **BD HealthSight™** software and services, you'll have:

Guidance from a specialized BD HealthSight™ Insight Consultant who partners with you in your pursuit of desired outcomes

Continuous, personalized support, tools and training beyond implementation

Periodic reviews against established KPIs to analyze how your efforts play into your goals

When you work with BD, you can grow your confidence that medications across your enterprise are where they need to be!

Learn how to manage medication inventory and help reduce medication errors across your healthcare systems with BD Connected Medication Management solutions at bd.com.
