

# I'm a resistance fighter™

## Combating antimicrobial resistance (AMR)

As the CEO of a healthcare system, ensuring patient safety and providing quality care are my key areas of focus. This includes reducing the risk of adverse events, such as hospital-acquired infections, and managing resistant organisms in my healthcare system. I want to enable the best possible outcomes for patients and employees while minimizing risks and costs, which is why I deploy rigorous infection prevention guidelines, advocate for strong awareness of antimicrobial stewardship and encourage physicians and partners to use smarter diagnostic practices. As the uncertainty around the financial and regulatory environment continues to increase, I need to work with all of my partners in the healthcare system to reduce costs and risks associated with AMR. **Because all of us need to be resistance fighters.**
