

Where expertise meets simplicity

BD PartnerPath™ Program—creating a clearer pathway for the commercialization of your combination product.

The commercialization of a combination product can be a complex process that involves obtaining the proper data, choosing a drug delivery system, developing a regulatory strategy and conducting clinical trials—all of which can increase development risks and affect your molecule's time to market.

The BD PartnerPath™ Program has been created to support customers in drug development who value speed to market. Designed to help alleviate barriers to commercialization of your new or biosimilar combination product, the BD PartnerPath™ Program can help you:

Reduce clinical and registration trial risks

Enable the selection of the right product for pipeline development

Support greater long-term commercial success

Ensure primary and secondary system integration

Robust data sets. Integrated device solutions. Exceptional BD expertise.

With the BD PartnerPath™ Program, you now have access to small-scale quantities of the primary and secondary delivery solutions you need to meet your needs for clinical development—along with supporting documentation and extensive BD expertise in managing system interfaces.

So your drug gets to market as quickly as possible—and performs under real-life conditions.

The value of the BD PartnerPath™ Program

Firsthand access

...to the integrated BD portfolio of drug delivery solutions

Flexibility

...to accommodate smaller quantities for development stage work

Transparency

...to access technical dossiers and drawings to support risk management planning and regulatory preparation

Less risk

...of slowing down regulatory approvals

Confidence

...in choosing the right container and compatible secondary systems for your molecule

Recommendations

...of preconfigured product sets based on experience of a leading resource

Expert clarity

...on technical issues in primary and secondary packaging for combination products
